“Fiscal Narratives and Inflation” (with Sarah Arndt). *Job Market Paper*.

Abstract: This paper investigates how media narratives on fiscal policy shape households’ inflation expectations. We collect a large corpus of newspaper articles reporting on fiscal policy from four major German newspapers spanning from 2006 to March 2025. Using a large language model (ChatGPT), we introduce a strategy to automatically identify different fiscal narratives in text and construct narrative indices out of this data. We then

estimate the effect of these narrative indices on household inflation expectations and find that they all have a positive significant effect varying in size. Lastly, we measure how fiscal narratives affect the transmission of a government spending shock to the economy and find that some narratives have an amplifying effect while others dampen the impact.
